

Dr Adrian Low

Dr Adrian Low is an interventional cardiologist with the National University Health System. He has an interest in transradial coronary interventions especially with the use of small lumen catheters. This has been called "slender interventions" among Japanese physicians and serves to minimize vascular trauma and improve patient comfort. He is an Associate Professor with the Yong Loo Lin School of Medicine, National University of Singapore and is involved in the teaching of medical students and supervision of cardiology Fellows. His research interest include acute coronary syndromes, genetics, and biomarkers in cardiovascular diseases.

My presentation will be an evaluation on the utility of DVTS system in Interventional Cardiology.
