(9) If you found any problems in teleconference, please write any comments you may have.

Regarding #7 - DVTS would be better if image quality was of supreme importance (i.e. - sharing fluoroscopy or other images requiring fine detail). But for ease of use I like this system better. Regarding #8 - I have other options I would go to first, but this is not a bad platform. It would be nice to have a text window to submit comments without interrupting program. I will comment that the audio from Malaysia was softer than the audio from Taipei. I had to pull my volume down when Taipei spoke and turn it up when Malaysia spoke.
